

Software Versioning Glossary

Use with care → x.x.x-alpha, 0.x.x

Can be used in production → 1.x.x

Example:

0.1.0 = Feature implemented

0.1.1 = Fixed bug

1.0.1 = First release

1.1.0 = Release with new feature

1.1.14 = Release with bug fixes

1.2.0 = Release with another new feature

Additionally subfixes can be applied to put emphasis on alpha/beta releases by appending -alpha or -beta to the versioning number respectively.

Example:

1.0.0-alpha

1.1.0-beta

Note: bugfix number gets revamped after new feature installment
